

For Students: Using Respondus and Duo in the Online Test Environment

2019-10-09 - Taylor Kahny - Canvas

Although the online test environment is much different from traditional paper-and-pencil testing in a classroom, faculty and staff at Penn Nursing have worked to ensure that the experience is identical in terms of academic efficiency and integrity. To establish a secure testing platform while preventing cheating of any kind, the University uses Respondus Lockdown Browser, a tool which locks students in to the testing environment. Respondus is a browser separate from the browsers you typically use, such as Chrome and Firefox. The Respondus Lockdown Browser is the only application that can run throughout the testing timeframe. In other words, students cannot have PowerPoint, Word, a PDF document, a snipping tool, or any other window open during the exam unless otherwise specified by the instructor.

Installing LockDown Browser

Download and install the browser **prior to your practice test/exam period** using this link only: <https://download.respondus.com/lockdown/download.php?id=424638276>

Once you complete the setup wizard, you will find the LockDown Browser in your computer's applications. Often, this will show as an icon on your desktop:

Before you can begin working in the browser, you will need to ensure that all other applications are closed. Either close the windows manually or enable LockDown to terminate the applications when prompted by a pop-up message.

Using Duo Push Notifications & Authentication

When the applications are closed, you will then be directed to complete two-step authentication. Type in your PennKey credentials, and then open your Duo Mobile phone application. Often, your phone will generate a pop-up for you to "Click 'Approve' in the Two-Step prompt":

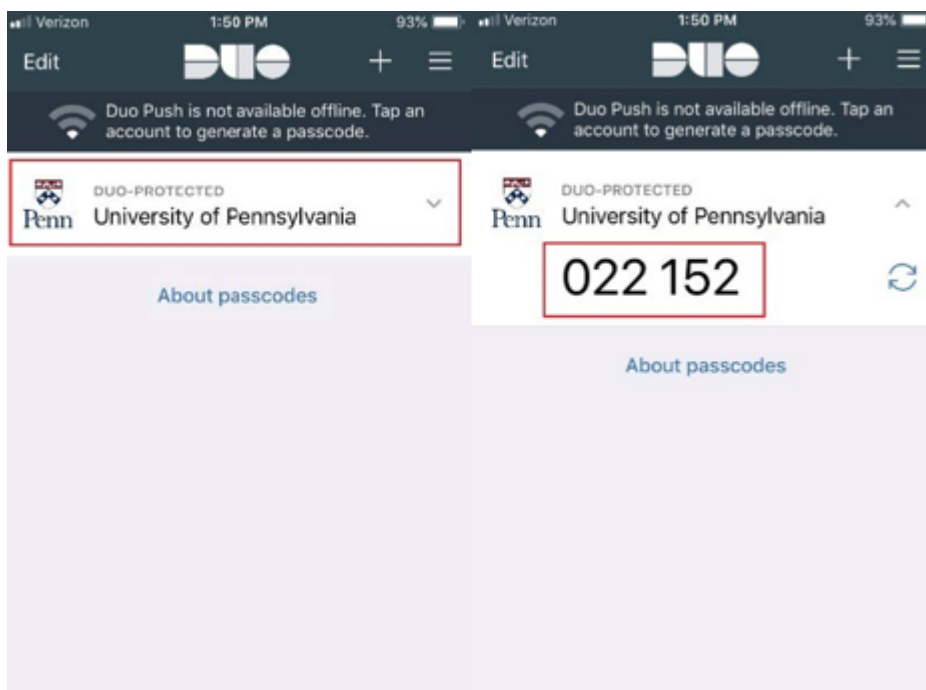

If you do not receive the prompt or do not have the Duo app installed on your phone, refer to the additional options listed below.

Option 1:

If you do not receive the prompt, you can click the University of Pennsylvania dropdown to generate a code. [The Duo app on your device can generate six-digit verification codes without a real-time Wi-Fi or cellular connection.](#)

To generate a code, open the Duo app on your mobile device and tap to expand the “University of Pennsylvania” dropdown. A six-digit code will display, as shown below. Enter this code on the Two-Step page in your browser:

Option 2:

Print a list of 20 pre-generated passcodes to use for Two-Step Verification.

If you do not have the Duo app on your mobile device, you can pre-generate and print codes from the Two-Step website at <https://twostep.apps.upenn.edu/>. After logging in to the website using PennKey, click Manage Settings as shown below.

Penn WebLogin: Two-Step Verification

Two-Step Verification

Protect your PennKey by using both your password and a verification code generated on your phone or device.

[Learn more about Two-Step verification](#)

You may be asked to confirm your PennKey password to access the Settings page. Next, scroll to the Devices section, and click Generate Codes. On the next page, click Print to print your list of codes for future use, as shown below.

Devices [Test a code](#)

- Duo Push: Yes, you are enrolled in Duo Push. [Unenroll from Duo Push](#) [Test Push](#)
- Duo Push phone: Type: Mobile, platform: Apple iOS, id: DPQ-... [Change phone](#)
- Default Push: Yes, pushing by default in Penn WebLogin. [Stop pushing by default](#)
- Default voice / text: No, you are using default Duo Push
- Keychain fob: [Add fob](#)
- TOTP / Google authn: [Add TOTP app](#) [Change phone / secret](#)
- Browser trust: You have 26 trusted browsers
- Printed codes: Current index is: 1 [Generate codes](#)

Generate codes [Log out](#)

Note: If your activated device is not available or not working, use one of the single-use verification codes below to log in.

[Print the codes and instructions](#) now using your browser, and keep them safe.

You can use each code once, in sequence. It is recommended that you cross out the codes that you have already used. If you forget which code you used last, enter any **two** unused codes in sequence (separated by a space). If you lose your printed codes, or use them all, go to the "Manage settings" page and click the "Generate codes" button to create a new set. Any previously unused codes will be invalidated.

Currently valid codes:

21. 702753	31. 312897
22. 694995	32. 923458
23. 460967	33. 479949
24. 227202	34. 313935
25. 918848	35. 505923
26. 200941	36. 407099
27. 436332	37. 360406
28. 201892	38. 280641
29. 083396	39. 492742
30. 016700	40. 316224

[PRINT](#)

To use your passcodes after printing:

1. Log in with your PennKey and password.
2. When prompted, enter a passcode in your browser.
3. Each code works one time and must be used in consecutive order (cross them out as you use them!)

If you lose your codes, you can log in to <https://twostep.apps.upenn.edu/> again, click "Manage settings," and generate a new list. Note that you'll need access to your primary or back up Two-Step device to generate a new set of codes.
